

AIRWIRE®

NEW PRODUCT

The XDRIVE™

Use Your Favorite NMRA-DCC Sound Decoder with an AirWire Drop-In Decoder

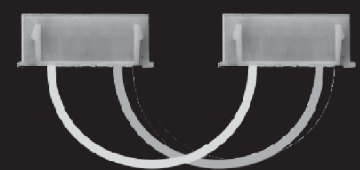

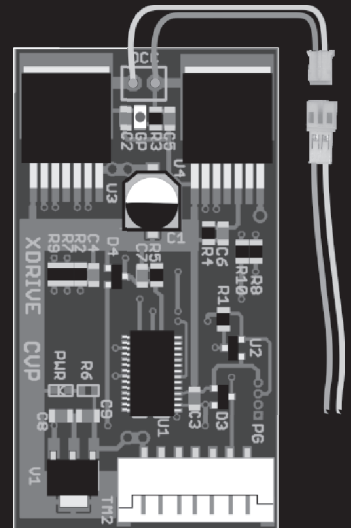

With the new XDRIVE™ board plugged into your AIRWIRE USA-Trains Drop-In decoder, you can now use any brand of NMRA-DCC sound decoder.

The XDRIVE output is rated at 3 Amps continuous providing plenty of power for the DCC decoder. The XDRIVE output is protected against short circuits and overheating.

Wiring is simple because the XDRIVE comes with the Drop-In connection harness. The harness plugs into the Drop-In socket and the other end slips into the XDRIVE socket.

The XDRIVE output has a pre-attached 2mm plug. The matching 2mm socket pigtail is included. The XDRIVE output connects to your DCC decoder's track-pickup input connections. There are no modifications to the DCC Decoder.

XDRIVE is available now for only \$49 MSRP.
